

Provider Check Line

eMedNY offers a toll free phone number (866-307-5549) for providers to learn the check amount issued for a specific NPI or MMIS Provider ID (for atypical providers) for the current week. The check line number can be called beginning on Thursday afternoon for the check dated the following Monday and is available for one week. The check amount received is released two and half weeks later. Past check amounts are not available.

If the provider is receiving more than one payment for the current week, the check amount returned will be the sum of the payments (checks or EFTs).

This feature of eMedNY allows providers to predict future cash flow and possibly detect payment issues in advance of the receipt of remittance information.
